

MODEL MITC *FALCON*  
September 20, 2002

## IFAD1 INTERFACE ADAPTER MODULE

The IFAD1 (2097) plug-in module is a three-slot wide MITC-*FALCON* series compatible card. It has one internal slot for the installation of a single slot wide, or a center-mounted double slot wide, 2073 series Interfacer module (refer to the specifications of the desired Interfacer module to determine its compatibility with the Model 2097). The Model 2097 takes power from the back plane of the MITC-*FALCON* chassis, regulates and conditions it when necessary, and powers the installed Interfacer module. The Model 2097 has no front panel interface and does not control any Interfacer boards that require a front panel switch for functionality.

MITC Adapter 2097, as shown above with  
IOC020 installed.

### FEATURES

- Compatible with all Price Class I and most Class II & III 2073 Interfacer modules
- The Interfacer modules can be replaced without removing the Model 2097
- No jumpers or setup necessary
- Hands-free operation
- Triple slot width module

### SPECIFICATIONS

- Provides +5V and -5V power direct from the system power supply
- Provides regulated +12V and -12V power at up to one (1) amp.
